Preprint

Postprint

Publisher

Preprint, Postprint?

- **Preprint:** original version of the manuscript as it is submitted to a journal
- **Postprint: (Accepted manuscript)** document that has been through the peer review process and incorporated reviewers comments. It is the final version of the paper before it is sent off to the journal for publication
- **Publisher:** version of record that is published on the publishers website. It will look quite spiffy, having been professionally typeset by the publisher. Library databases will link to this version of the paper

Preprint

Accepted manuscript

Published journal article

Help and support

Preprint

- Authors can share their preprint anywhere at any time.
- If accepted for publication, we encourage authors to link from the preprint to their formal publication via its Digital Object Identifier (DOI). Millions of researchers have access to the formal publications on ScienceDirect, and so links will help your users to find, access, cite, and use the best available version.
- Authors can update their preprints on arXiv or RePEc with their accepted manuscript .

Please note:

- Some society-owned titles and journals that operate double-blind peer review have different preprint policies. Please check the journals Guide for Authors for further information.
- Preprints should not be added to or enhanced in any way in order to appear more like, or to substitute for, the final versions of articles.

Open Access policies

Accepted Manuscript

Authors can share their accepted manuscript:

Immediately

- via their non-commercial personal homepage or blog
- by updating a preprint in arXiv or RePEc with the accepted manuscript
- via their research institute or institutional repository for internal institutional uses or as part of an invitation-only research collaboration work-group
- directly by providing copies to their students or to research collaborators for their personal use
- for private scholarly sharing as part of an invitation-only work group on [commercial sites with which Elsevier has an agreement](#)

After the embargo period

- via non-commercial hosting platforms such as their institutional repository
- via commercial sites with which Elsevier has an agreement

In all cases accepted manuscripts should:

- link to the formal publication via its DOI
- bear a CC-BY-NC-ND license – this is easy to do, [click here](#) to find out how

Dynamic electrical behavior of halide perovskite based solar cells

Jun 1, 2016

A **dynamic electrical** model is introduced to investigate the hysteretic effects in the I-V characteristics **of perovskite based solar cells**. By making a simple ansatz for the polarization relaxation, our model is able to reproduce qualitatively and quantitatively detailed features **of** measured I-V characteristics. Pre-poling effects are discussed, pointing out the differences between initially over- and under-polarized samples. In particular, the presence **of** the current over-shoot observed in the reverse characteristics is correlated with the **solar** cell pre-conditioning. Furthermore, the **dynamic** hysteresis is analyzed with respect to changing the bias scan rate, the obtained results being consistent with experimentally reported data: the hysteresis amplitude is maximum at intermediate scan rates, while at very slow and very fast ones it becomes negligible. The effects induced by different relaxation time scales are assessed. The proposed **dynamic electrical** model offers a comprehensive view **of the solar** cell oper

scholar.google.com/

The screenshot shows the Google Scholar interface. At the top left is the Google Scholar logo. The search bar contains the text "Dynamic electrical behavior of halide perovskite based solar cells". Below the search bar, there is a section for "Articles". On the left side, there are filters for "Any time" (with sub-options: "Since 2018", "Since 2017", "Since 2014", "Custom range...") and "Sort by relevance" (with sub-option: "Sort by date"). The main search result is for the article "Dynamic electrical behavior of halide perovskite based solar cells" by GA Nemnes, C Besleaga, and AG Tomulescu, published in Solar Energy Materials in 2017. The abstract text is partially visible. At the bottom of the result, there are links for "☆", "🔗", "Cited by 12", "Related articles", and "All 8 versions". A red arrow points to the "All 8 versions" link.
